Richard Andrews

Senior Software and Artificial Intelligence Engineer @ otyx systems
Mudersbach, Rhineland-Palatinate, Germany

Summary

At Otyx Systems, I bring over two decades of software development experience, now focused on agentic engineering, emotionally-aware AI, and practical AI applications. I lead R&D on our in-house EmotionAI project, developing persistent, emergent AI agents designed to push the boundaries of long-term interaction and digital personality.

In parallel, I offer AI consultancy and engineering services for companies looking to integrate Large Language Models, build intelligent agents, or explore custom AI solutions. My approach combines deep technical expertise with a systems-thinking mindset. I'm driven by a love of innovation, meaningful collaboration, and building things that actually work in the real world.

Experience

otyx systems, Germany
